Inspections:

Pervious Pavement Inspection:

	Bad	Fair	Good
Nearby Erosion			
Sediment/Grit/Dirt Evident			
Bare Soil			
Chemicals, Vehicle Oil, etc.			
Holding Water			
Nearby Weeds			
Nearby Sinkholes			
Deterioration of Surface			
Structural Problems			

Pervious pavement consists of porous asphalt, porous concrete, or various porous structural pavers laid on uncompacted soil.

Stormwater drains through the surface, is temporarily held in the open pore spaces, and then slowly drains into the underlying soil.

Plant Inspection:

	Bad	Fair	Good
Bare Soil			
Mulch			
Sediment Build-up			
Erosion			
Invasive Species			
Weeds			
Uniform Vegetation
